Besta.domains – Suggestions API (update 2020/11)

Some new exciting updates. Results are better. Parsing and word breaking more reliable. Details below.
Here is an example. We break up the words, and find meaning. Then, we generate domain suggestions.

* now finds more available ".com" results
"thisisgood.com" > "thisisdecent.com, thisissuperb.com"

gets context of word
"tigerking" > "tigerking movie, tigerking cast"

* now works much better for obscure terms

* understands word hacks and incomplete fragments
like "politica" or "polit"

* common words have gotten even better,
like "super.com"

* bug fixes and improvements make parsing
difficult strings much better

refined brandable suggestions, phrase hacks, added
hyphenated ".com"s

* fixed a major issue pairing TLDs with names –
now more relevant

* more accurate availability checking

* fragments now work well: "politica, politi, politicali"
* fun and playful results: "nowayjose.com, forkthis.com, underwater.com"
* tricky queries parsed/interpreted reliably: "queerl ,policea, curtainsrus, greatist"
* occasionally we get the parsing/breaking wrong, but the results are still not bad, because our unique sentiment analysis algorithm only uses positive suggestions. So, even if not completely relevant, the results are never embarrassing: "puddenhead.com, trytobrkthis.com, whazzzup.com"

Next todo:
* Better Natural Language processing. Currently relying on a lot of hacks, like simply replacing a word with its synonym from the same part-of-speech. This is still better than other suggestion tools, but does not always sound natural. We're working on improving our "Markov strings" and other NLP tools to construct human-like phrases.
* More available ".com" results – more word hacks and creative transformations, more business words prepended/appended, to find more available ".com"s. Currently, DomainsBot finds more available ".com" results than we do for some queries. That won't be the case for long. We will analyze internet search results, articles, writing, current events, memes, wikipedia, to find more before/after words, to prepend/append. We'll add quantity, while maintaining the highest quality.
* Will work with registrars/hosting companies to decide which features to work on, how to improve the results, and what type of infrastructure/server work needs to be done to deliver this data more efficiently.
